Technical Skills

Category	Technologies & Tools
AI & Machine Learning	YOLO (Model training & data labeling), LLMs (Fine-tuning & querying workflows), Ollama, Computer Vision.
Frontend	React, TypeScript, JavaScript, Tailwind CSS, Vue.js, Angular.js, HTML5, CSS.
Backend & APIs	Spring Boot, Java, Python, RESTful API architecture and development.
Databases	PostgreSQL (Architecture, design, optimization, and administration), MySQL, ORM, advanced SQL.
Emerging Tech & Tools	NVIDIA Omniverse (Digital Twin), n8n (Workflow Automation), Docker, CI/CD, Git, Vercel, Railway.

Software Projects & Experience

- **Professional Experience:**
 - **Full-Stack Developer (Escribanía Sureda-Antonovich):** Developing a comprehensive end-to-end management web application and automated protocol system using **React** and **Spring Boot**. Designing a reactive user interface, defining the brand identity, and managing the entire project lifecycle.
 - **Health Data Analyst (AI & Computer Vision):** Leveraging artificial intelligence for image recognition systems in projects for industry-leading companies such as Johnson & Johnson, Takeda, Edwards, and Alcon. Utilizing tools like **YOLO** (training and labeling) and integrating **LLMs** to process and analyze complex health data.
- **Personal & Freelance Projects:**
 - **Amateur Soccer Tournament Platform:** Full-stack development of a management system featuring custom algorithms for individual scoring and a dynamic "World Cup" mode.
 - **ERP System Architecture (Club Deportivo y Social de Mar de Ajó):** Designed and structured the formal technical proposal and system architecture for a

- comprehensive Enterprise Resource Planning system.
- **Equine Therapy Management System (CEDICA):** Developed a custom platform integrating relational databases to streamline employee tracking, service provisioning, and patient communication.
- **Veterinary Clinic Platform:** Built a comprehensive system encompassing appointment scheduling, digital medical records, and REST API integration for community web services.
- **University Projects (Facultad de Informática UNLP):**
 - **Project Lead / Coordinator:** Orchestrated full-stack application development within simulated agile environments. Managed the entire software lifecycle, from client requirement gathering to CI/CD pipeline implementation.
 - **System Integration:** Supervised the integration of multiple software modules across staging and production environments, ensuring solid database design and API connectivity.

Education

- **University Programming Analyst (Analista Universitario en Programación)** - Graduated, UNLP
- **B.S. in Computer Science (Licenciatura en Sistemas)** - UNLP (Over 50% completed)
- **B.S. in Electronic Engineering** - UNLP (Over 50% completed)
- Educational training in Leadership.

About Me

Proactive and responsible Full-Stack Developer with a strong focus on Frontend architectures and AI integration. I am passionate about building responsive user interfaces, designing robust databases, and continuously exploring emerging technologies like LLMs and Digital Twins. I thrive in collaborative environments but also possess the autonomy required to drive complex projects from system architecture to deployment.
